EXPECT MORE

As a Microsoft Dynamics® SL user,

here's a way to get more and do more for less.

Are you getting the most out of your current account structure?
Optimize now—change, merge, and reformat accounts, sub-accounts, and over 40 key fields.

KeyChange

KeyChange is the most widely sold add-on product for Microsoft Dynamics SL with over 2,600 installations in over 24 countries. Thousands of databases have been updated.

Your business has changed; is your structure starting to show its age? KeyChange enables you to safely change over 40 key fields in your Dynamics SL database. Change one account or sub-account, or redesign the entire chart from top to bottom.

Changes can be entered directly into the spreadsheet-like grid or read from an ASCII file. KeyChange then performs a global update of the entire Dynamics SL database. Security is controlled through Dynamics SL's password maintenance screen, and only the system administrator can process KeyChange batches. A permanent cumulative audit trail is printed & maintained on the system.

Benefits:

- Clean up a Chart of Accounts that has become dated due to changes in company structure, reporting requirements, personnel, and improper maintenance. Add intelligence into your accounts. Improve reporting and Management Reporter performance.
- Reformat account numbering schemes from four characters to six or ten, or from ten to six or four, or any combination. Add a new segment to your sub-account.
- Combine one or more accounts into a new or existing account without losing history.
- Change account types from asset to liability or income to expense.
- Eliminate unused or obsolete accounts, sub-accounts, vendor, or customer IDs without losing history.
- Change or combine multiple customer or vendor IDs that were set up incorrectly.
- Renumber inventory product lines, renumber Project and Task, and more.
- Account – sub-account combination changes available.
